Learn large-scale data-driven web development with the Perl scripting language and the MySQL database. Perl and MySQL Web Development: A Data-Driven Approach concentrates on the practical coding required to build robust and capable web applications with Perl and MySQL. Starting from the fundamentals, youll move from code snippets to fully functional Perl scripts that culminates in the project for the book â€" a feature rich data-driven bulletin board. Packed with code examples, this book leaves no stone unturned. The various practical methods required to build powerful web applications are covered in detail, using plain language descriptions and exercises. To cover the various implementations and configurations available with this program set, youll work through a functioning example of a complex bulletin board program that utilizes the full capabilities of Perl, the Apache web server, and the MySQL database. Youâ€™ll explore the various possibilities available for the creation of dynamic, data-driven web pages. The project is a working example of the technologies at play and a fully functional and feature rich data-driven bulletin board program. A bulletin board is a collection of topics that the users can post threads in. Within these threads are text, or text and image posts, that reflect the thread and topic categories.
